SUMMARY

Ph.D. in Mechanical Engineering with specialization in nonlinear dynamics, topological metamaterials, vibration and acoustics, and quantum-analogous computing.

- Research expertise in analytical modeling, numerical simulation, and experimental validation of nonlinear mechanical systems.
- Studied coupled granular networks, nonlinear mass-spring systems, and classical elastic lattices to investigate complex dynamic responses.
- Developed quantum-inspired state representations in classical mechanical systems, including modal superposition, geometric phase, and topological behavior.

ACADEMIC CREDENTIALS

Wayne State University

Ph.D. in Mechanical Engineering

GPA: 3.93/4.00

Dissertation Title: *Classical Realization of Quantum and Topological States through Nonlinear Elastic Networks*

Committee: Dr. M. Arif Hasan (Chair); Dr. Sean Wu; Dr. Chin-An Tan; Dr. Mohammad Bukhari; Dr. Pierre Deymier

Detroit, Michigan, USA

Jan 2022 – Dec 2025

Wayne State University

M.Sc. in Mechanical Engineering

GPA: 3.93/4.00

Thesis Title: *Nonlinear Dynamics Driven Quantum Analogous in Classical Granular Metamaterial*

Advisor: Dr. M. Arif Hasan

Detroit, Michigan, USA

Jan 2022 – May 2025

Bangladesh University of Engineering & Technology

B.Sc. (Engg.) in Mechanical Engineering

GPA: 3.30/4.00

Thesis Title: *Electro-Thermo-Mechanical Response of a Thin Conductive Layer of Metal Matrix Composite Reinforced by Graphite Fibers*

Advisor: Dr. Shaikh Reaz Ahmed

Dhaka, Bangladesh

Feb 2016 – Mar 2021

RESEARCH INTERESTS

Topological Metamaterials
Acoustic Waveguides

Quantum-Analogous Computing
Vibrational Mechanics

Nonlinear Dynamics
Solid Mechanics

CONFERENCE PROCEEDINGS & PRESENTATIONS

- 184th Meeting of the Acoustical Society of America, Chicago, Illinois, USA, 2023 (**Technical Talk**).
- International Conference on Smart Mobility and Vehicle Electrification, Hybrid, Lawrence Technological University, Detroit, Michigan, USA, 2023 (**Technical Talk**).
- Graduate Research Symposium, Wayne State University, USA, 2024 (**Poster Presentation**).
- APS Eastern Great Lakes Spring Meeting, Kettering University, Flint, Michigan, USA, 2024 (**Technical Talk & Poster Presentation**).
- APS March Meeting, Minneapolis, USA, 2024 (**Technical Talk, Online**).
- International Mechanical Engineering Congress & Exposition, Portland, Oregon, USA, 2024 (**Technical Talk & Poster Presentation**).
- 187th Meeting of the Acoustical Society of America, 2024, (**Technical Talk, Online**).
- APS Eastern Great Lakes Fall Meeting, Marietta College, Marietta, Ohio, USA, 2024, (**Technical Talk**).
- NewFoS Research Symposium, University of Arizona, Tucson, Arizona, USA, January 2025, (**Poster Presentation**).
- 188th Meeting of the Acoustical Society of America, New Orleans, Louisiana, USA, 2025, (**Technical Talk**).
- APS March Meeting, Denver, Colorado, USA, 2026, (**Technical Talk**).
- 190th Meeting of the Acoustical Society of America, Philadelphia, Pennsylvania, USA, 2026, (**Technical Talk**).
- APS Eastern Great Lakes Section (EGLS) & MIAAPT Joint Meeting, Wayne State University, Detroit, Michigan, USA, 2026, (**Technical Talk**).

RESEARCH EXPERIENCE

Research Assistant

Detroit, Michigan, USA

Acoustic Pseudospin and Metamaterials Laboratory
Wayne State University

Jan 2026 – Present

- **Project 1:** Developed reduced-order models for phase-preserving transfer of mechanical quantum-analogue states. Defined bridge-fidelity metrics for evaluating optical/RF interface performance.
- **Project 2:** Investigated nonlinear band-edge acoustic thermometry in periodic elastic waveguides. Used harmonic-ratio and geometric-phase diagnostics for Li-ion battery safety applications.
- **Project 3:** Developed elastic-bit co-processor concepts for low-power edge and IoT sensing. Implemented elastic metamaterials for mechanical filtering, spectral transforms, and feature extraction.

Graduate Research Assistant

Detroit, Michigan, USA

Acoustic Pseudospin and Metamaterials Laboratory
Wayne State University

May 2024 – Dec 2025

- **Project 1:** Development of the **Elastic Bit** (classical analog of quantum bit) in a classical elastic medium of granular beads using the linearized and nonlinear model. Constructed an analytical and experimental model of a nonlinear granular network using **asymptotic perturbation techniques**, formulating a higher-

order system with time-dependent superposition. Designed an experimental setup to create an elastic bit in a nonlinear granular network, achieving decoherence-free superposition of states for potential data transmission (NSF Grant 2204382).

- **Project 2:** Developed a theoretical framework for manipulating elastic bits' superposition of states and generating **Berry Phase** in a linearized and nonlinear elastic network, demonstrating quantum-classical correlations in both time-dependent and independent systems (NSF Grant 2242925).
- **Project 3:** Development of an algorithm to demonstrate the scalability of the **Logical Elastic Bit** in a mass-conical spring model. The harmonic response of the nonlinear system is modeled to show the time dependence of the elastic bit in the same model.
- **Project 4:** Investigated symmetry breaking in granular networks using a **second-order Molecular Dynamics** algorithm, revealing internal parameter variations that drive topological transitions across the **Brillouin Zone**. Multiple masses in the unit cells are considered to explore the **Hilbert Space**.

Research Collaborator

Tucson, USA

New Frontiers of Sound (NewFoS)

Sep 2023 – Present

The University of Arizona

Project: *Topological Acoustic (TA) Quantum Analogies for Quantum Information Science (QIS)*

- **Primary Investigator:** Investigation of multi-qubit analogue in a classical nonlinear mass-conical spring oscillator. Demonstration of scalable harmonic structures to form superposition of states and quantum-analogous gate operations like Hadamard and Phase gates. (NSF Grant Number 2204400).
- **Co-Investigator:** Development of the **Phi-Bit** (Phase Bit) by studying three coupled finite-length acoustic waveguides. This model effectively predicts the continuous phase behaviors of phi-bits across varying conditions (NSF Grant Number 2204400).
- **Project Contributor:** Contributed to the analysis of phase-pattern reversals in a symmetry-broken three-mass resonator network. Studied how reversing the stiffness ordering of coupled springs changes the internal phase/sign structure of the lower nonzero vibrational branch, providing a finite-system analogy to topological band reorganization and nonlinear-mode-like behavior.

Undergraduate Research Assistant

Dhaka, Bangladesh

Department of Mechanical Engineering

Nov 2019 – Feb 2021

Bangladesh University of Engineering & Technology

- Study of the strength of metal matrix composite (MMC) due to electrical current passing through a thin composite material. The research explores the thermal stress generated in the MMC due to the current and the effect of the MMC mesh geometry.
- Analyzed stress tolerance limits and failure characteristics due to thermal and mechanical stresses in the material using a **tensile** and **compression** testing machine.
- Development of a **heat pipe** exchanger model to increase heat transfer efficiency in a compact thermal management system for a high-performance induction motor.

TEACHING EXPERIENCE

Graduate Teaching Assistant

Detroit, Michigan, USA

Wayne State University

Jan 2022 – May 2024

- Served as **Course Instructor** for ME 3400: **Dynamics I** and ME 5000: **Engineering Analysis**, delivering lectures, designing problem sets, and evaluating student performance for both undergraduate and graduate cohorts.
- Provided instructional support for multiple laboratory and recitation sections, including grading, feedback, and individualized student mentoring.
- Assisted in exam administration and proctoring, ensuring academic integrity and smooth execution of assessments.

Research Experience Mentor

NSF Project

New Frontiers of Sound (NewFoS)

Jan 2023 – May 2025

- Mentored and supervised undergraduate researchers through the NSF New Frontiers of Sound (NewFoS) Research Experience and Mentoring (REM) program, guiding them in hypothesis formulation, experimental planning, data acquisition, and interpretation of results in nonlinear and topological

- acoustics.
- Trained students in the design and analysis of elastic waveguide systems, including mode identification, dispersion characterization, and phase–amplitude mapping, to investigate classical analogues of quantum information states.
- Facilitated literature review sessions and data presentation workshops to strengthen students’ ability to connect experimental observations with theoretical models and communicate findings effectively.
- Oversaw independent research projects culminating in poster presentations at institutional and national conferences, fostering early-career engagement in interdisciplinary acoustics and quantum-inspired mechanics.

PROFESSIONAL EXPERIENCE

Engineer Trainee (Intern)

BSRM Steel Limited

Chattogram, Bangladesh

Jan 2020 – Feb 2020

- Gained hands-on experience in industrial steel-rod manufacturing processes at one of Bangladesh’s leading steel producers, observing and participating in the full production cycle: billet reheating in walking-beam furnaces, multi-pass hot rolling, controlled water-quenching, and atmospheric cooling to produce TMT reinforcement bars meeting ASTM and BSTI standards for construction-grade applications.
- Assisted in the **Mechanical Maintenance** of re-rolling mill equipment, including rolling stands, drive shafts, guide assemblies, and cooling-bed conveyors; performed routine inspections, precision alignment, lubrication scheduling, and fault diagnostics using both preventive and corrective maintenance protocols to minimize unplanned downtime and uphold production safety standards.

TECHNICAL SKILLS

- **Fabrication & Experimental:** Granular Bead Network, Mass-Conical Spring Model, Coupled Linear Waveguides, Heat Pipe Exchanger Design/Fabrication, Vibration Testing Setup Design, Topological Mass-Sensing Prototype Design/Fabrication.
- **Programming & Simulation:** C/C++, Python, MATLAB, LabVIEW, Windows PowerShell, COMSOL, ANSYS FEA, Algorithm Development, Data Processing, Signal Processing, Automated Data Acquisition.
- **Mathematical Modeling:** Finite Difference & Element Formulation, Multi-order Asymptotic Perturbation Modeling, Fourier Harmonics, Nonlinear Dynamics Modeling, Structural Dynamics.
- **CAD & Design:** SolidWorks, AutoCAD, CATIA, Creo, GD&T.
- **Instrumentation & Hardware:** Laser Doppler Vibrometer (Polytec), Oscilloscope (Tektronix), Function Generator (B&K Precision), Power Amplifier (Piezodrive), Vibration Shakers/Exciters, Transducers, Synchronized Sensor Integration.
- **Standards & Methods:** Experimental Data Acquisition, Noise Isolation, Measurement Repeatability, Preventive Maintenance, Diagnostics, Hardware Characterization, Root Cause Troubleshooting.
- **Productivity & Documentation:** L^AT_EX, Microsoft Office.
